

Figure 1 displays a sequence of 40 grayscale images arranged in a 4x10 grid. Each image shows a handwritten digit '4' on a white background. The images are indexed from 1 to 40, starting from the top-left and moving right, then down. As the index increases, the digit becomes progressively more distorted, noisy, and less recognizable, illustrating the concept of a 'noisy' or 'corrupted' version of the original digit.
